One ASP.NET vNext

Goals

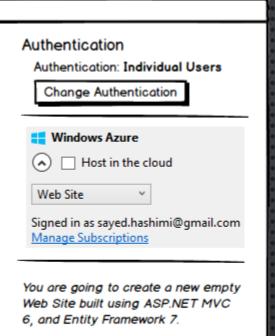

- Present vNext and existing tech on the same level
- Provide a clean & consistent user experience for developing ASP.NET apps

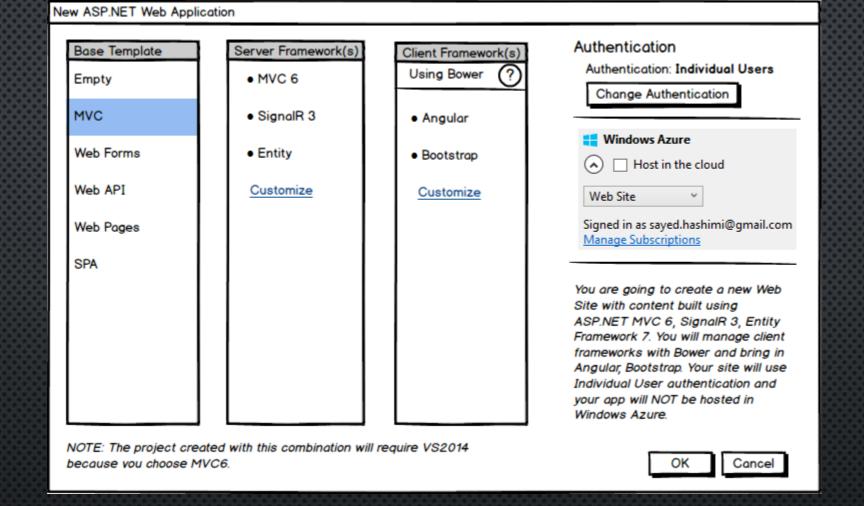

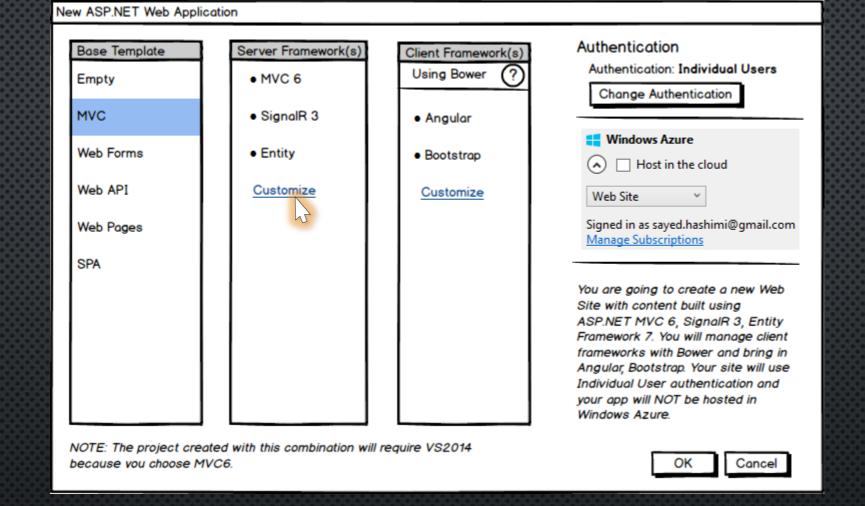

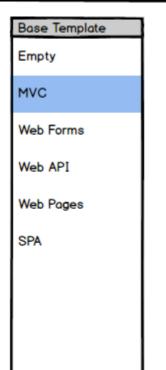

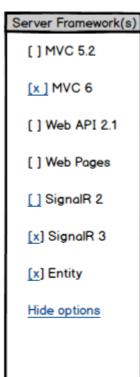

NOTE: The project created with this combination will require VS2014 because you choose MVC6.

OK

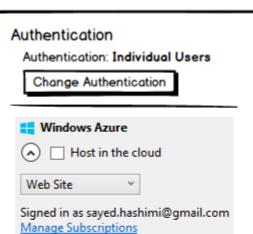

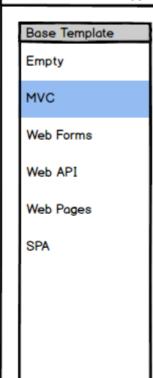

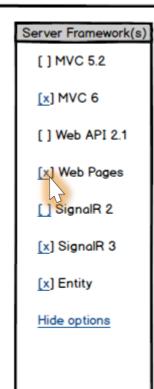

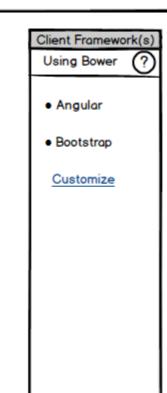

You are going to create a new Web Site with content built using ASP.NET MVC 6, SignalR 3, Entity Framework 7. You will manage client frameworks with Bower and bring in Angular, Bootstrap. Your site will use Individual User authentication and your app will NOT be hosted in Windows Azure.

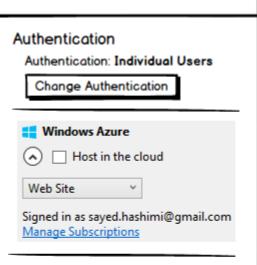

NOTE: The project created with this combination will require VS2014 because you choose MVC6.

OK

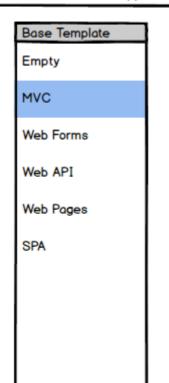

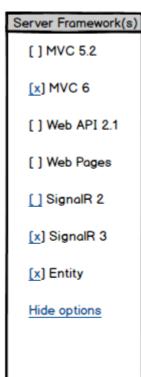

You are going to create a new Web Site with content built using ASP.NET MVC 6, Web Pages, SignalR 3, Entity Framework 7. You will manage client frameworks with Bower and bring in Angular, Bootstrap. Your site will use Individual User authentication and your app will NOT be hosted in Windows Azure.

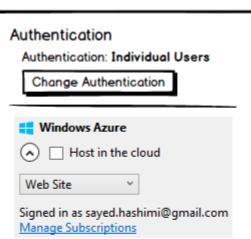

NOTE: The project created with this combination will require VS2014 because you choose MVC6.

Some Ideas

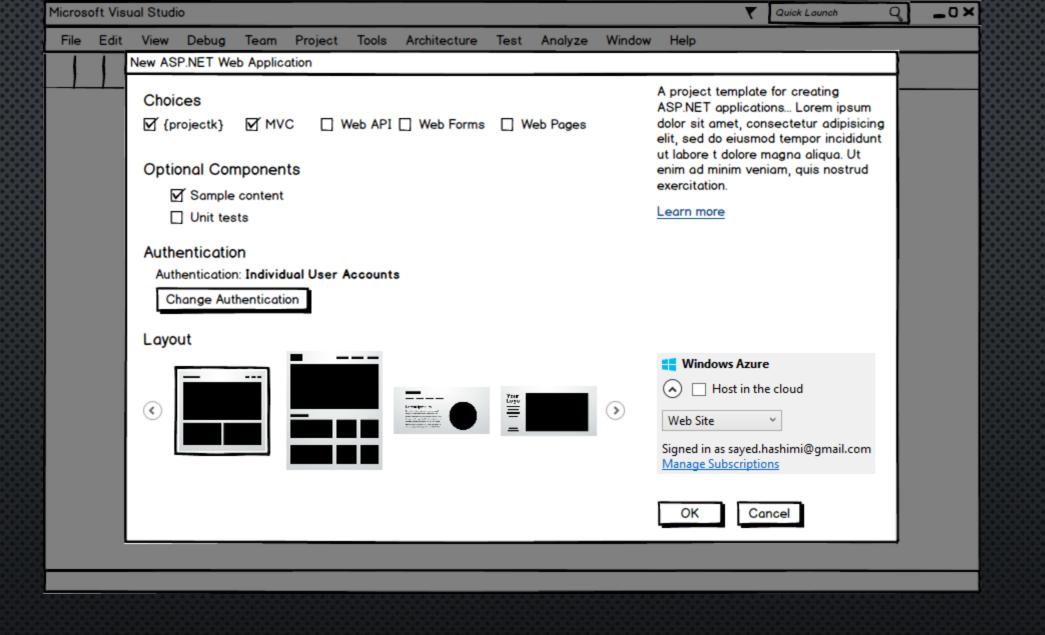

#1

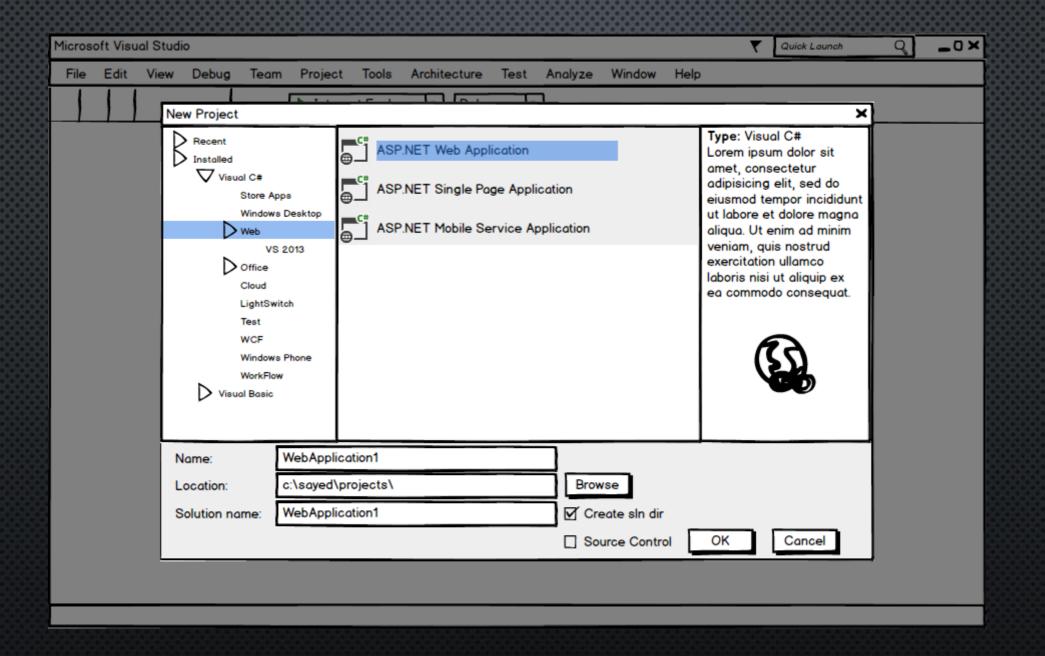

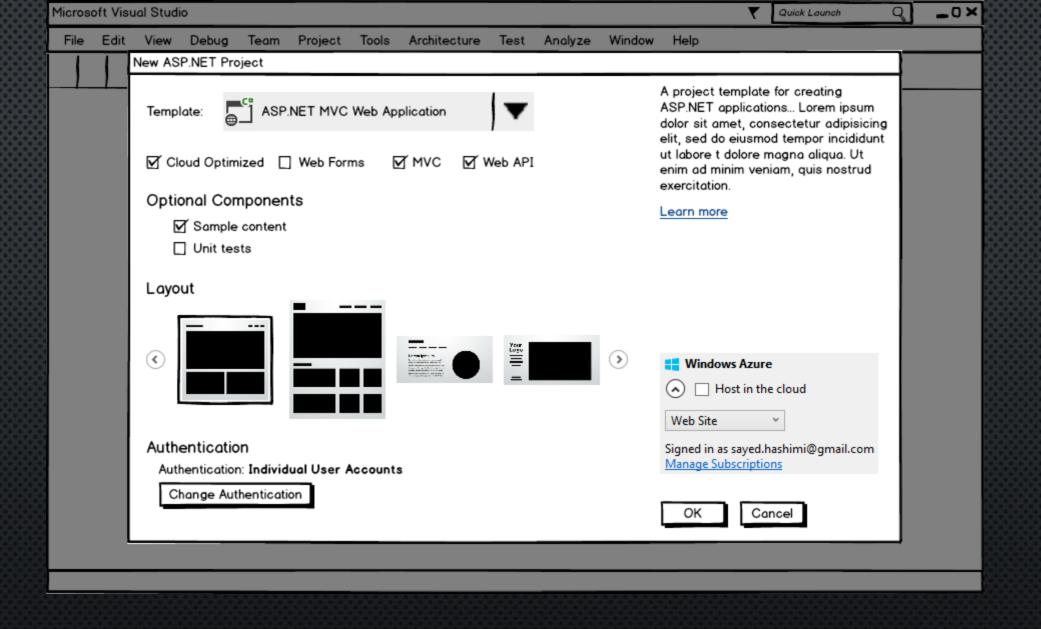

BACKUP SLIDES

You can see the selected template, and switch templates just like you could previously. But the template selection takes up much less space. Layouts from here.
